

Herff Jones Power Plugs

Let Us Make Things Easier!

What is a Power Plug?

Power Plugs are plug-ins and scripts for PageMaker 6.5 and higher designed specifically to aid in the production of yearbook pages. These functions are also available for InDesign. The automated plug-ins include:

- **Power Template** is a script that automates the process of setting up your yearbook page templates.
- **Power Panels** automates the process of creating panel photos.
- **Power Photo** numbers the photos across your spread, gives photo dimensions, and creates close and loose register rule lines.
- **Power Align** allows you to align copy, captions, text, graphics, and photos.
- **Power Flip** lets you flip objects or an entire layout.
- **Power Rotate** lets you easily rotate objects or an entire layout.
- **Power Fraction** creates a professional looking fraction with one click of the mouse.
- **Power Caps** saves hours of editing by letting you change the capitalization of text.

- **Image In** allows quick placement and cropping of digital photos from your digital camera into your electronic layouts, and:
 - displays up to 250 photos in a scrollable window as you preview a yearbook layout
 - converts color images to black and white
 - applies rule lines of consistent size and color around all photos at once
 - rotates photos
 - mirrors images
 - adjusts scale and rotation with easy-to-use sliding bars
 - allows photo placement while working with multiple spreads in a document
 - shows images cropped and in position on the thumbnail layout
 - updates the layout area as you scale, rotate, mirror or clip images
 - builds a picture folder for submission of linked files to your plant with the layout
 - allows you to crop and place photos without photo editing software

- **Red Eye** allows you to reduce the effect of red eye in your photos.
- **Ghost** allows you to ghost an image from 25-75 percent.
- **Layout Builder** allows you to place all the yearbook designs in the Your Layouts booklet or GO Design collection quickly and easily on to your template.
- **Package Manager** collects the links, fonts, and images necessary to successfully print your pages.
